SPAN DESIGN SERVICES

We are committed to providing all of our clients with a consistently high quality, professional service, from testing a single fabric sample, or giving budget prices for canopies, right through to the full design, supply and installation of the structure and membrane. Within the tensile fabric structure industry itself, fabric testing, patterning and detail design form the basis of the services we offer.

The core of our business lies in our design and detailing work for tensile fabric structures. With our broad collective expertise covering the full range of skills from concept design right through to installation on site, we can offer economical, creative and reliable solutions to our clients in all aspects of tensile membrane canopies.

The full design, manufacture and installation of structures requires great care and attention to detail in all the other disciplines involved. There is more information about designing fabric structures in our articles page.

Whether you need budget prices, sketches, or full CAD graphics, we can help you plan and create great tensile structures.

We use the latest Autocad software to produce realistic and detailed 3d images to enable us design the supporting structure more accurately and efficiently. This combined with our specialist "form finding" software gives us great flexibility to explore and develop client requirements at early consultation and planning stages.

Materials

- Tensile strength : 2200/200 N/5cm
- Tear Strength : 280/280 N
- Low Temperature-No Crack At : -30 C
- A : UV resistant .
- B : FR Flame Retardant .
- C : Warranty : 10 years .

- At Leeds we have large stocks of aluminium profiles and extrusions for all forms of tents and shading structures.

- Material : UV stablshed HDPE
- Temperature range : -30 C to +75 C
- Tensile Strength - Weft : 635 N/50mm
- Tensile Strength - Weft : 2494 N/50mm
- Bursting Pressure (Mean) (AS 2001.2.4) : 3500 kPa
- UV Block : Up to 98.8%
- Warranty : 10 year UV*

Kedar

As part of our on-going service to the Marquee and Tent industry. We supply Brithish manufactured tent Kedar. Used to engance and stabilize tents and shades structures

The Kedar comes in two sizes. (8mm and 14mm)

* UK Manufactured

ALBASSAM S-029

WHAT IS HOT DIP GALVANIZING ?

Hot Dip Galvanizing is a form of corrosion protection method, which involves coating an iron or steel structure with molten zinc.

SCREWS

Stocked in steel | zinc plating.
• Available in 18-8 stainless steel
• Hot dipped galvanized, plain, and black oxide.

GAS EPOXY MIO JOTUN

Paint epoxy high-quality composed of two compounds formed with a thickness large, anti-corrosive, contains chips iron oxide colored layer of a solid buffer against the passage of moisture and air pollutants and reflect UV rays and prevents access to the layer resin.

KEDAR CORD

- Transparent PVC kedar cord for tarp and Tent Kedar Industry.
- Solid cable produced from PVC for textile reinforcement .
- Available in 2 diameters : 6mm, 12mm
- Roll Length : 250m. - 10 years warranty

ALBASSAM

TIR CABLE

- Official TIR Cable for haulage. Translucent cover PVC with a core of steel laid according to custom regulations.
- Diameter : 6mm.
- Coil Length: 250m.

ALERNATIVE STEEL

- Steel Cable used for fastening of Tarpaulins.
- A cover of translucent PVC with a core of steel.
- Diameter : 6mm.
- Coil Length: 250m.

ALBASSAM

THREAD

A twisted continuous filament polyester sewing thread with high tensile strength and tear resistance :

- Good seam strength
- Superior Sewability
- Better resistance to UV Exposure
- * USA Manufactured
